

EBUS - Endobronchial Ultrasound Simulation Based Education

The Simulation Centre offers the bronchoscopy course in two formats:

Regular course. For trainees in Region East of Denmark (Capital region of Denmark and Region Sjælland), the course follows a 4-step approach and is distributed across a course of several weeks. It starts with an introduction, self-training that is distributed across several sessions and finally a validated test with a specialist.

Two-day intensive course. For trainees outside Region East, including international trainees, the course is designed to accommodate 2 trainees at a time. Introduction starts on a Monday afternoon followed by 5-6 hours of intensive self-training sessions (Monday evening and Tuesday morning) and finally a test on Tuesday afternoon.

Safe and proper performance of clinical procedures requires both theoretical knowledge and good technical skills. The latter is traditionally learned as apprenticeship where the trainee practices on patients under supervision. Simulation based training is, however, a good way to ensure that basic skills are acquired before the trainee meets the patient.

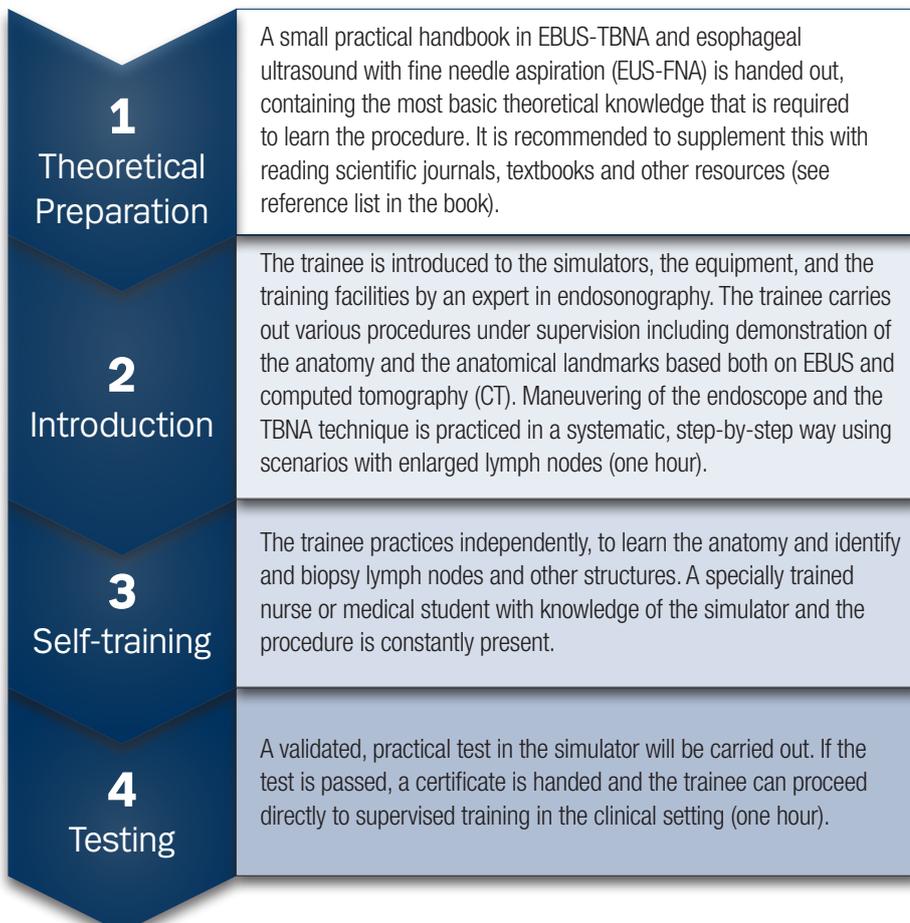

The simulation based training programme in endobronchial ultrasound with real-time guided transbronchial needle aspiration (EBUS-TBNA) at the Centre for Clinical Education consists of active training on modern virtual reality simulators and demonstration of a real EBUS endoscope and needles. The educational offer is completed with a certification that can form the basis for further training in the clinical setting. See more about this course at www.cekusim.dk.

Target Group: Pulmonologists, thoracic surgeons, and other specialists going to learn EBUS-TBNA.

Instructor: Paul Frost Clementsen, Consultant, MD, PhD, DMSc.

Location: Simulation Centre Rigshospitalet, CAMES Rigshospitalet, Teilumbygningen 5404, Blegdamsvej 9, 2100 Copenhagen, Denmark.

Price: The course fee is 1,100 Euro per participant. Trainees from Region East can participate free of charge, as the course fee is paid by the Capital Region of Denmark.

Registration

To register for the course send an email to kontakt@cekusim. Please include your name, personal email address, mobile number, hospital, department and position. Additionally, trainees (non-specialists) need approval from their department before they can register and *must* include the name of the consultant responsible for education in your registration email.
